

Take the fastest path from data to decision with no-limits data access

More data for more insights

Make it easier — and much faster — for your data teams to query federated data and produce advanced analytics and visualizations from *all* of your data sources, including your data lake.

DATA ENGINEERING | Streamline and simplify data connectivity, governance, and engineering work.

- Create strong one-and-done data pipelines from Starburst with no need to move or replicate data.
- Cascade security and access controls to Tableau by managing them through a single pane in Starburst.
- Adhere to data residency requirements while providing access to global data sets.
- Connect 50+ common data sources in just a few clicks.
- Enjoy optimized performance and speed in Tableau with large compute workloads automatically pushed down to Starburst's federated query engine.

Save on costs: Minimize the compute and egress costs associated with copying and moving data into a single location for processing.

DATA ANALYSIS | Provide the all-access pass data analysts and business users need to answer pressing questions and stay in the flow.

- Easily query multiple data sets in Tableau, regardless of location and format, raw or refined, structured or unstructured.
- Reduce time to connect new and previously siloed sources, getting fresh data to analysts faster.
- Remove the need to load and manage data in Tableau, freeing up analysts' time and improving data accuracy and currency.
- Get answers faster with Starburst's MPP (massively parallel processing) for large, complex queries.
- Help analysts and business users do their best work with intuitive, AI-augmented BI and visualization tools and the guardrails that prevent broken data sets or regulatory violations.

Move fast: Starburst, built on open-source Trino, outperforms self-managed Trino in tests with Tableau ~95% of the time with speed improvements.

“Starburst is an essential part of our overarching datamesh initiative that gives the user the flexibility to access data through a single point, rather than having to go around to 10 different data sources.”

– Ritesh Ranjan, lead data architect, [Sky](#)

Take data analysis, insights, and storytelling to new heights with Tableau's intuitive interactive visualization platform and Starburst's no-limits, risk-reduced streamlined data access.
